**Wind Turbine Specialist Parts  
& Equipment Logistics**

## WIND TURBINE SPECIALIST PARTS & EQUIPMENT LOGISTICS

**APS Express Logistics** actively works in the renewable energy sector all over the UK & Europe. Building on our experience in the Time Critical sector, we have used this knowledge and expertise to meet the challenges created by moving wind turbine parts and associated components.

We have built a dedicated team with a wealth of knowledge that understands the unique requirements involved in transporting all wind turbine components.

**Planning and preparation are the keys to successful wind turbine parts transportation.**

- ✓ **UK & European Direct Drive Specialists**
- ✓ **Time Critical Urgent Parts Delivery Service**
- ✓ **Over 30 Year's Experience**

## WHAT WE DO

From the first contact with our customer, we will dispatch the vehicle to be at the collection point at their requested time. We aim to collect within an hour from any location in the mainland UK. We will collect from the Client's Stores Warehouse, the Substation, the Turbine itself, the technicians' home or hotel, or any agreed location.

Once the items are collected, we direct drive them anywhere in the UK or Europe. We understand the Time Critical urgency of the parts we deliver and only do direct drives to the delivery point. We will deliver anywhere the client requests, client's Stores Warehouse, the Substation, the Turbine itself, or out of hours to your Technician's home or hotel or their starting time-on-site next day.

We already provide this unique **Time Critical Urgent Parts delivery service** for *GE Renewables & Netro Energy* – turbine downtime has been dramatically reduced, additionally allowing their technicians to remain working on-site, not driving around for parts.

- ✓ **UK Mainland Collection within 1 hour**
- ✓ **Direct Drive to UK or Europe**
- ✓ **Delivery to Warehouse, Substation or Turbine**

## TRAILER HIRE SERVICE

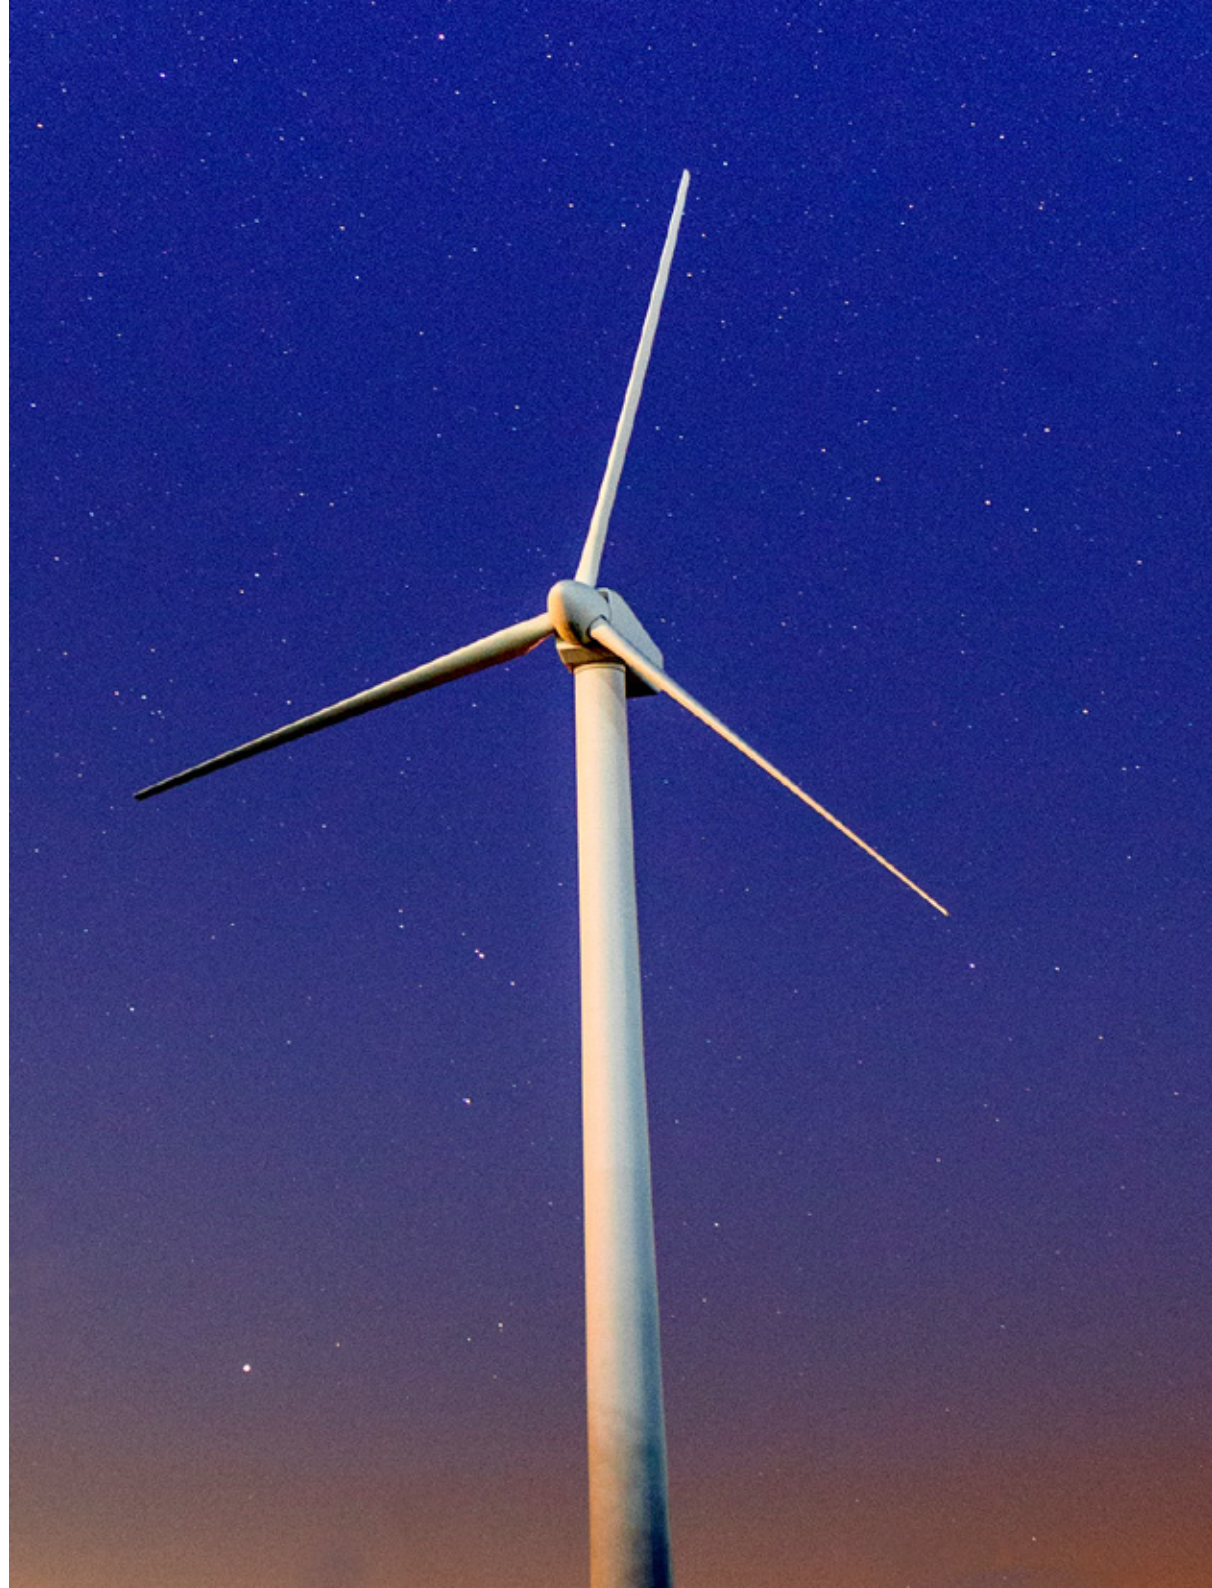

We also provide a trailer hire service for our clients.

This service is for mainly heavy items like motors that can weigh anything from 500 kg to 1000 kg.

When the motor has been delivered by us, usually to the Substation, the client will hire a trailer from us. At the time of fitting, they would lift the motor onto the trailer, then their van could tow the trailer up to the Turbine within their own time frame.

The trailer makes it easy to lift the motor off with the turbine lifting hoist, compared to the motor being inside a panel-enclosed van.

- ✓ **Trailer hire service for heavy items**
- ✓ **Easy access for hoisting**
- ✓ **Complete fitting in your own time frame**

## WHY APS EXPRESS?

If you have a part anywhere in the UK that needs to be fitted on a Turbine urgently, anywhere in the UK or Europe, day or night, delivered to the Technician or Turbine, we are the one-stop-shop company you need as your supply partner.

This unique Time Critical logistics service we offer has been tried and tested to the highest level with our current partners, GE Renewables and Netro Energy, and it works.

None of the commonly known courier businesses can offer this type of service. They **will not** and **cannot** deliver to a Substation or Turbine or directly to your Technician day or night, home or hotel. **We will.**

**We operate 24/7 – 365 days a year.**

Together we can keep the Turbines doing what they do best, making energy.

- ✓ **Urgent Deliveries throughout the UK & Europe**
- ✓ **24/7 – 365 Days**
- ✓ **One-Stop Shop Supply Partner**
